Projects

"Dining with the ISS"

<https://github.com/davidvaughan86/dining-with-the-ISS>

Dining with the International Space Station is my first group project. We combined two different public API's to design this amazing orbital tracker will inform the user of the exact location of the ISS and provide great places to eat near(under) it.

"DigitalCrafts Quiz App"

<https://github.com/davidvaughan86/DigitalCraftsQuizApp>

My team and I created a web app using Express and Postgres to assist students with their knowledge in coding. We found that playing helpful study games and practice quizzes helped us understand coding even better, so we wanted to create an App that would help others succeed.

"Credit Sharks"

<https://github.com/davidvaughan86/Credit-Sharks-React-Solo>

This prototype showcases my abilities in React to create online retail shops. This application uses JavaScript, React, and CSS. It contains no frameworks and makes use of Flexbox. This was a solo project, and the goal is to create a fully functional online store prototype with Stripe API.

Work History

Account Manager

05/2019 to Current

AT&T – Atlanta, GA

- Contributed to annual revenue of \$487,800 by identifying pain points and offering individual based wireless and broadband solution services and developing new accounts.
